INTERNAL USE ONLY

Please Note:
Weather Monitoring Sites are current and active
SPWMD, USACE or USGS locations that reside
in the DBHYDRO corporate database.
Displayed Site locations have data within the last
90 days. Status of Non-District data is based on
the date of the most recent data received.
For Map information please contact:
Rick Householder @ Ext. 6582 or
Diane Smith @ Ext. 6813
For Database information please contact:
Brian Turcotte @ Ext. 6579
As of 1999, all Site coordinates are gathered using
approved professional grade GPS Receivers with an
accuracy level of two meters or higher.

Please Note: All Mapped Dots represent Sites where monitoring stations are located.
Please see the following descriptions for further clarification.

Site / Station Definitions

STATION: A specific coordinate that indicates where data (observations, sampling or monitoring) is collected. Data are usually assigned to Stations by various classifications such as Stage, Flow, Weather, and Water Quality. A coordinate may have more than one Station associated to it. The name given to a station has traditionally been similar to, or an exact duplicate of, the corresponding site name (see "site" below).

SITE: A representative point used to designate one or more Stations that are associated by proximity or project. Site level representation is to provide clarity for small scale mapping in lieu of displaying a high density of associated stations. The Site location is often based on the position of a recording device, such as a remote terminal unit (RTU), or can be derived from a common sense location between the associated stations. A Site should not be viewed as an area feature with specific boundaries but simply as a representative location of activity.

Summary: Both a "Station" and "Site" represent a location for information, with station being specific to the collection of data and site being a general approximation of associated stations.
